PROFESSIONAL SUMMARY

Senior Software Engineer with 4+ years of experience (including 1 year of internship) designing and building scalable backend systems for OTT and content platforms using Node.js, TypeScript, Express.js, MongoDB, Redis, RabbitMQ, GraphQL, and AWS. Experienced in microservices, event-driven architectures, payment integrations, background processing, and cloud-native deployments. Improved API response times by 30% through caching, batching, indexing, and query optimization. Passionate about building secure, high-performance, and reliable backend services at scale.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript

Backend: Node.js, Express.js, Microservices Architecture, Cron Jobs, Background Processing, Cloudflare Workers

APIs & Data: REST APIs, GraphQL, DataLoader, API Design

Databases: MongoDB, MySQL, Redis, Database Design, Query Optimization, Indexing

Messaging: RabbitMQ (event-driven systems)

Observability: Prometheus (prom-client), Grafana, Metrics Aggregation, Application Monitoring

Performance: Query Optimization, Indexing, Pagination, Batch Processing

Cloud & DevOps: AWS (EC2, S3), Docker, Kubernetes (via Rancher), GitLab CI/CD

Security & Auth: JWT, OAuth, Role-Based Access Control (RBAC)

Tools & Practices: Git, GitLab, Agile/Scrum, Code Reviews, Technical Documentation, Production Troubleshooting

EXPERIENCE

Senior Software Engineer

Inflolabs Private Limited (Revidd) | Dec 2025 – Present

- Promoted to Senior Software Engineer in recognition of technical leadership and consistent delivery of high-impact backend systems across the OTT platform.
- Lead the design and architecture of backend microservices, driving decisions on service boundaries, data modeling, and event-driven workflows using RabbitMQ.
- Implemented Node.js Cluster-based multi-process architecture to leverage multi-core CPUs, improving throughput and application resilience under high concurrent traffic.
- Implemented multi-process monitoring and metrics aggregation across clustered Node.js processes using Prometheus (prom-client) to improve observability and operational reliability.
- Mentor interns and junior developers, conduct code reviews, and provide technical guidance to ensure code quality, maintainability, and adherence to engineering best practices.
- Collaborate with frontend, mobile, and QA teams to deliver seamless API integrations and production-ready features across multiple tenant deployments.

Software Engineer

Inflolabs Private Limited (Revidd) | Jun 2023 – Nov 2025

- Improved API response times by ~30% using Redis caching, DataLoader, batching, pagination, and MongoDB query optimization, enhancing application performance and user experience.
- Designed, developed, and maintained scalable RESTful APIs and GraphQL services supporting OTT applications, subscriptions, payments, and content delivery workflows across a high-volume API surface.
- Developed and maintained 10+ backend microservices using Node.js and TypeScript for OTT platforms serving thousands of daily users.
- Designed asynchronous event-driven workflows using RabbitMQ, reducing service coupling and improving scalability and fault tolerance across distributed services.
- Built secure authentication, authorization, and subscription lifecycle systems supporting TVOD, bundles, and multi-item purchases with JWT, OAuth, and RBAC.

- Developed scheduled background jobs and automation workflows using Cron Jobs and Cloudflare Workers for content ingestion, synchronization, and business processes.
- Built high-availability payment workflows and integrated third-party payment providers including Stripe, PayPal, and Razorpay.
- Integrated Karix SMS/OTP services for user verification and transactional notifications.
- Implemented AWS S3-based media upload workflows using signed URLs for secure and scalable content handling.
- Containerized applications using Docker, managed CI/CD pipelines with GitLab, and supported deployments on Kubernetes using Rancher.

Software Engineer Trainee

Infolabs Private Limited (Revidd) | Jun 2022 – May 2023

- Developed backend modules for a production-grade OTT platform using Node.js, TypeScript, GraphQL, and MongoDB.
- Contributed to authentication, authorization, subscription management, and content delivery workflows.
- Improved application performance through Redis caching, MongoDB query optimization, indexing strategies, and efficient database access patterns.
- Debugged and resolved issues across development, staging, and production environments, improving application stability.
- Collaborated with frontend and QA teams to support seamless API integration and feature delivery.
- Participated in Agile development processes including sprint planning, stand-ups, estimation, and retrospectives.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science & Engineering | 2019 – 2023 | CGPA: 9.25

GMR Institute of Technology (GMRIT), Rajam, Andhra Pradesh

Jawaharlal Nehru Technological University (JNTU), Vizianagaram

CERTIFICATIONS

- JavaScript - The Complete Guide 2023 (Beginner + Advanced)
- Node.js, Express, MongoDB & More: The Complete Bootcamp 2023
- Kubernetes for Developers
